

TRIP TIC DISPLAYS

LARGE SCREEN SOLUTIONS FOR DAYLIGHT CONDITIONS

Tower: Public display system

The Triptic Tower is an impressive concept for public display technology. This self supporting tower is easily installed and available in a range of forms and sizes from 67" - 200". Towers can be custom designed for interior or exterior applications.

The tower display provides excellent visibility in crowded public areas, and provides a new level of flexibility for integrators. Architectural integration in difficult situations has never been easier due to the self standing design.

The quality of the on-screen image is assured through the use of the exceptional DNP BlackBead, DNP Alpha and DNP New Wide Angle screens. These rear projection screens are true high precision multi optical elements that are produced in Denmark by DNP the world leader in optical rear projection screens. Image quality is assured.

A variety of custom configurations are available to meet the demands of different situations and Triptic's design team can configure Towers to meet the specific demands of particular projects.

Aesthetically speaking the Tower is highly adaptable to the environment and custom forms are available as well as a selection of exterior surface finishes including brushed stainless steel, thermo lacquered finishes, natural wood grain, plastic or other finishes.

Triptic Audio Vision are innovators in the domain of architectural integration and daylight video displays and we can provide consultancy and design services that will guarantee the most stunning results, at the best price.
